

**MARKETING ANNOUNCEMENT
NEW 6" BEVELED T&G TOOLING
SEPTEMBER 7, 2011**

In a continued effort to best serve our fabrication network and keep our PVC profiles at the level of excellence you have come to expect, Enduris is pleased to announce all new tooling for the 6" Beveled T&G product lines. This is a significant investment which will go a long way to assuring you good, clean and crisp pickets.

In time, everything wears in the extrusion business. When tools age, they lose their sharp corners and slightly enlarge from hours of machine time. As a result, the pickets extruded on the new tooling will be approximately 1/16" narrower. For those of you using 71 1/2" and 95 1/2" rails, you may want to consider 70 1/2" and 94 1/2" rails. Both are currently inventoried. If jigs are used to assemble panels or gates, a slight adjustment may be necessary.

Pricing remains the same.

We felt it necessary to inform you as minor modifications may be necessary and the important fact that Enduris continues to invest in the business.

Thank you for your loyalty.

Regards,

J.R. Wearne
Sales and Marketing Manager
